Baxter Product Security Bulletin

RE: Log4j

Publication Date: December 13, 2021
Updated: December 28, 2021

SUMMARY

Baxter is currently monitoring the recently published announcement of vulnerabilities affecting Log4j Java-based logging library. The Log4j library is developed by the Apache Foundation and is widely used by both enterprise apps and cloud services for logging purposes. The vulnerabilities have been classified as critical.

For a more detailed description of these vulnerabilities, it is recommended customers view the information provided by Apache.

RESPONSE

Please note that the Apache Log4j vulnerabilities are not Baxter-specific vulnerabilities. As part of the company’s product security policy and protocols, Baxter’s team continues to evaluate Baxter’s Java based products and solutions for potential impacts from these reported vulnerabilities and evaluating further possible actions as needed.

Impacted Products

At the time of the publication of this update, all Baxter products are either not impacted, patched, or mitigations have been applied. Baxter will continue to monitor all available information and we will provide an update to this bulletin if necessary. For questions regarding cybersecurity of any Baxter product contact: productsecurity@baxter.com
